

Delock USB Type-C™ Triple Display Docking Station with DisplayLink® 4K / USB Hub / LAN / SD / Audio / PD 96 W

Description

This docking station by Delock can be connected to a computer with a USB-C™ DP Alt Mode, Thunderbolt™ 3 or Thunderbolt™ 4 and provides a variety of interfaces. **Three monitors** can be operated at the monitor outputs at the same time. **Five built-in USB ports** allow the use of peripherals and another USB port can be used to charge mobile devices. Connectors for a **microphone** and **speaker**, a **Gigabit network** connection, as well as a card reader for **SD** memory cards complete the features.

Triple Display 4K UHD resolution

When using the three video outputs at the same time, one monitor is operated via DisplayPort Alternate Mode, the other two via **DisplayLink®**. One port can be used from each double group of DisplayPort and HDMI connector. The Delock docking station can also be operated on devices without a USB Type-C™ port with DP Alt Mode support, with a video output on a maximum of two monitors. A maximum resolution of **4K** on all ports can be guaranteed, regardless of the operating system. Due to the DisplayLink® graphics chipset it is possible to use mirrored and extended screen functions on Windows and Mac OS operating systems.

USB Power Delivery (USB PD 3.0) support up to 96 watt

Via the power supply, which is connected to the docking station, the host device is charged with up to 96 watts during operation.

Stand

Due to the **vertical installation**, the Delock docking station takes up less space on the desk.
